OPENFAIRWAY GOLF — EQUIPMENT ART BIBLE

The Pro Shop Spec Book

Every club model in the game's economy, organized for a 3D artist: what geometry to build once, and how to reskin it into forty-five distinct pieces of secondhand equipment — plus seven putters that get to be their own objects.

45 catalog entries | 5 shared club-head meshes | 9 unique putter meshes | Godot 4 · glTF pipeline

00

How the pieces fit together

One rule drives the whole pack: **geometry is shared, texture is the story.** A club's rarity, price, and history are told entirely through its skin.

- **Five head meshes total** — driver, fairway wood, hybrid, iron, wedge — each built once. Every model of that type, from a $8 grocery-store wedge to a $170 tour grind, sits on the exact same head, shaft, and grip geometry. Only the material changes.
- **One shaft+grip rig** shared by all five non-putter heads: straight steel shaft, standard-taper black grip. Length/lie can be a uniform scale on the shaft bone if you rig it, but static geometry is fine for a bag/inspection view.
- **Iron sets and wedges are catalog singles**, not six separate meshes. The game treats "4-9 irons" as one inventory item, and each wedge (PW/GW/SW/LW) as its own item on the shared wedge mesh — so one iron-head mesh and one wedge-head mesh cover the whole set.
- **Putters break the rule on purpose.** All nine putter-slot items — the clubhouse loaner, the seven collectible putters, and the admin-only Auto-Putt — get their own original head geometry. This is the one place to actually design, not reskin.

Target budget: this game runs on the Quaternius stylized low-poly nature kit, so club heads should stay in that visual register — clean stylized forms, no photoreal micro-detail. Aim for **600–1,200 tris** per non-putter head (whole club incl. shaft/grip under ~1,800), **1,000–2,000 tris** for putter heads, one **1024×1024** albedo/ORM texture set per model (a 512 atlas is fine for the loaners), baked normals from a mid-poly sculpt if you want the milling/forging detail to read up close.

The condition system (applies to every club)

Every instance carries a `condition` float from 0–1, independent of rarity or price — a common club can be mint, a legendary one can be trashed. Build wear as a second, condition-driven layer on top of the base skin: a grime/scuff mask blended in by condition, plus paint-chip and rust decals placed at fixed UV spots so they can be masked in and out.

Poor 0.0 | Worn 0.22 | Fair 0.42 | Good 0.62 | Excellent 0.82 | Mint 0.94+

Rarity key: Common · Uncommon · Rare · Epic · Legendary · Mythic

01

The five shared club-head meshes

Build each of these once, fully UV'd for a tileable-then-masked material. Every reskin below just swaps the material on this same mesh.

WOOD FAMILY · 01

Driver head

Large hollow shell, 460cc-class silhouette: broad shallow face, rounded high-toe crown, flat-ish sole with a slight bulge, short bent-neck hosel. Modern oversized-wood proportions — think any post-2005 titanium driver, not a classic pear shape.

Tris	700–900
Texture	1024^2
UVs	**crown / face / sole / skirt**, 4 islands

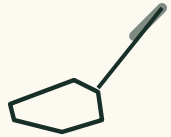

WOOD FAMILY · 02

Fairway wood head

Same family as the driver, scaled down: classic teardrop/pear head, shallower face, a small separate-looking sole plate rectangle for the metal-plate detail. Works for every "3W"/"5W" model since real fairway woods share this shape at any era.

Tris	500–700
Texture	1024^2
UVs	**crown / face / sole plate**, 3 islands

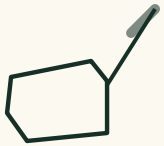

CROSSOVER · 03

Hybrid head

Compact rounded wedge between an iron and a wood: shallow rounded sole like a mini fairway wood, but a taller, more upright face like an iron. Small enough to read as a "rescue" club, not a shrunk driver.

Tris	450–650
Texture	1024^2
UVs	**crown / face / sole**, 3 islands

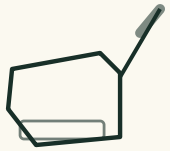

IRON FAMILY · 04

Iron head

One representative head (roughly a 7-iron profile) stands in for the whole 4–9 set: thin blade-length body, flat sole, top-line bevel, a milled-looking cavity or flat back depending on skin. Thin enough to read as forged when the material calls for it.

Tris	500–700
Texture	1024^2
UVs	face / back-cavity / sole, 3 islands

IRON FAMILY · 05

Wedge head

The iron head, thickened: wider sole with a visible bounce radius, slightly more upright/square face, a touch more offset. One mesh covers PW, GW, SW and LW — loft is a stat, not a shape change.

Tris	550–750
Texture	1024^2
UVs	face / back / sole bounce, 3 islands

THE EXCEPTION

Putter heads — 9× unique

Not a shared mesh. See Section 06 for full geometry, material, and reference notes on all nine.

Tris	1,000–2,200 ea.
Texture	1024^2 ea.
Meshes	9 total

02

Drivers · driver head mesh

One head shape, six finishes plus the clubhouse loaner. Real reference is grouped by era — two of these are meant to look like a specific decade of driver, not a specific brand.

MODEL	RARITY	PRICE	FINISH	LOOK FOR	REAL-WORLD REFERENCE
Loaner Driver loaner_driver	Loaner	—		*Generic clubhouse-rental grey, scuffed crown, worn grip.*	Any modern game-improvement 460cc driver, unbranded.
Thrift Titan 460 thrift_titan_460	Common	$24		*Dark grey/silver, faded logo ghost, sticker residue on the sole.*	General 2010s box driver
Slice Slayer Offset slice_slayer	Common	$20		*Navy/silver, visible offset hosel bend, draw-bias alignment mark.*	Offset game-improvement drivers
Persimmon Ghost persimmon_ghost	Uncommon	$55		*Real wood grain finish, brass sole plate, small black face insert, whipped-thread neck wrap.*	Persimmon drivers still in the game – SI Hickory & persimmon craft
Rocket Boomer LT rocket_boomer_lt	Rare	$110		*Loud red/cream early-2000s livery, thin-face warning sticker, chunky alignment stripe.*	Callaway ERC II – Golf Digest The trampoline-face era
Hollow Point Tour hollow_point_tour	Epic	$240		*Matte black, no retail decals, hand-stamped hosel serial, gold weight port.*	Unbranded tour-van prototype head — matte black, serial-stamped, no paint fill.

MODEL	RARITY	PRICE	FINISH	LOOK FOR	REAL-WORLD REFERENCE
Meteor XR Prototype meteor_xr_proto	Legendary	$520		*Raw exposed carbon-weave crown, deep purple sole, orange masking tape with a hand-written loft.*	Raw carbon-crown prototype drivers, current-gen visible-weave finish.

03

Fairway woods · fairway wood head mesh

MODEL	RARITY	PRICE	FINISH	LOOK FOR	REAL-WORLD REFERENCE
Loaner 3 Wood / 5 Wood loaner_3w / loaner_5w	Loaner	–		*Plain grey, no branding, shiny worn grip.*	Generic rental fairway wood.
Garage Sale 3 Wood garage_3w	Common	$14		*Dull grey-blue, grip tape peeking above the collar.*	Any late-2000s box-store fairway wood.
Steelhead Classic 3W steelhead_classic	Uncommon	$38		*Steel-blue crown, chrome sole plate, wide flat "Hawkeye"-style sole.*	History of the Steelhead – Golf Channel A golf industry legend
Tour Spoon 13° tour_spoon	Rare	$95		*Small compact head, matte black, gold weight port visible in the sole.*	History of the 3-wood / "spoon"
Lowball 5 Wood lowball_5w	Common	$12		*Chipped paint on the toe, worn crown decal.*	Generic dated fairway wood.
Heirloom 5 Wood heirloom_5w	Epic	$160		*Laminated maple grain (lighter/darker strata), small burned maker's mark on the crown.*	Laminated persimmon & maple woods

04

Hybrids · hybrid head mesh

MODEL	RARITY	PRICE	FINISH	LOOK FOR	REAL-WORLD REFERENCE
Rescue Rookie 3H rescue_rookie	Common	$16		*Slate blue, half-peeled loft sticker on the sole.*	What is a rescue club?
Cloudcutter 4H cloudcutter_4h	Uncommon	$36		*Deep-face profile, faint white alignment line on the crown.*	Evolution of hybrid clubs
Utility Iron 2U utility_2u	Rare	$90		*Slimmer hollow-body driving-iron shape (smaller than the other two), visible hollow-body seam line, no loft number stamped — just "TOUR."*	Modern hollow-body driving/utility irons (e.g. Titleist U-series, TaylorMade UDI-style clubs).

Modeling note: Utility 2U reads best if it's modeled slightly narrower front-to-back than Rescue Rookie / Cloudcutter on the *same* hybrid mesh — achievable with a non-uniform scale in the material/transform rather than a second mesh, if you want that one model to feel like a driving iron rather than a rescue club.

05

Iron sets · iron head mesh

Each row is a full 4–9 set represented by one head. Two models (Blade Runner Forged, Tour Forged CB) want a thinner top-line than the game-improvement rows — a material-only distinction is fine; a slightly re-profiled variant of the same mesh is nicer if you have the budget.

MODEL	RARITY	PRICE	FINISH	LOOK FOR	REAL-WORLD REFERENCE
Loaner Irons 4–9 loaner_irons	Loaner	–		*Mismatched brushed steel, one head visibly a different casting.*	Generic rental cavity-back set.
Thrift Cavity Backs thrift_cavity_backs	Common	$45		*Chunky cavity back, dull satin, one odd-one-out head in a different finish.*	Late-90s/2000s cast cavity-back game-improvement irons.
Mustard Muscle Backs mustard_muscle	Uncommon	$70		*Forged muscle-back, warm bronze patina, yellowed ferrule ring at the hosel, small forged stamp.*	Greatest Mizuno blade irons – GolfWRX
Game Improver XL game_improver_xl	Uncommon	$80		*Very wide sole (widen the sole geometry itself here), bright chrome, oversized cavity badge.*	Modern super game-improvement irons (wide-sole "SGI" category).
Blade Runner Forged blade_runner_forged	Rare	$190		*Thin top-line, satin finish, raw (unpolished) leading edge, minimal branding.*	Forged blade irons through the years
Tour Forged CB tour_forged_cb	Epic	$380		*Dark tour-van finish, faint hand-engraving under the grime, gold cavity accent.*	Tour combo-set forged cavity backs (players' CB, not retail GI).

MODEL	RARITY	PRICE	FINISH	LOOK FOR	REAL-WORLD REFERENCE
Combo Set Prototype combo_proto	Legendary	$720		*Deep midnight-blue, hand-stamped "PROTO" in the cavity, orange masking-tape loft marks.*	Modern hollow-long / forged-short combo iron sets.

06

Wedges · wedge head mesh

The strongest real-world reference for this whole category: Vokey's "Raw" finish wedges, unplated carbon steel that rusts on purpose — the exact logic behind Rusty Gap 52 and Raw Face 56 below.

MODEL	RARITY	PRICE	FINISH	LOOK FOR	REAL-WORLD REFERENCE
Loaner PW / GW / SW / LW loaner_pw / gw / sw / lw	Loaner	–		*Plain satin grey, half-worn grooves.*	Generic rental wedge.
Grocery Store PW grocery_pw	Common	$8		*Bright chrome, box-set look, tiny barcode sticker still on the shaft.*	Boxed department-store club set wedge.
Bent Neck PW bent_neck_pw	Uncommon	$30		*Gunmetal satin, loft hand-written on the hosel in paint pen.*	Custom-fit bent wedge, tour-van style loft marking.
Rusty Gap 52° rusty_gap_52	Uncommon	$34		*Orange-brown surface rust over the whole head — the rust is the finish.*	Does rust add spin to a wedge?
Flop Master 60° flop_master_60	Uncommon	$28		*Wide sole/high bounce (widen sole geometry), sharp bright grooves, open-face look.*	High-bounce lob wedge, wide-sole "flop" shape.
Raw Face 56° raw_face_56	Rare	$85		*Unplated grey steel body, visibly milled face pattern, faint rust starting only on the face.*	Vokey SM7 Raw finish – GOLF.com
Tour Grind 58° tour_grind_58	Epic	$170		*Dark tour finish, visible hand-ground heel relief, tiny stamped grind code.*	Tour-van custom-ground wedge sole (grinder marks at the heel).

MODEL	RARITY	PRICE	FINISH	LOOK FOR	REAL-WORLD REFERENCE
Sand Shovel SW sand_shovel	Common	$10		*Comically wide sole geometry (sole visibly wider than the face), plain chrome.*	Vintage extra-wide-sole sand wedge.

07

The putter collection · nine unique meshes, design freely

Every putter below is its own head mesh. The loaner is deliberately plain; the seven collectibles are the game's prestige objects and should look it in a cabinet.

Loaner Putter

loaner_putter · Loaner

"Dead and honest."

Plain straight blade, no offset, no alignment marks. Flat satin grey, bent shaft label peeling at the neck. Deliberately the least interesting object in the game.

Ref: any anonymous entry-level blade putter — no specific model, keep it generic.

Rustbelt Blade

rustbelt_blade · Common

"Clicky and honest. You hear every putt."

A no-frills straight blade with a centre neck bend, like a working-class Wilson 8802. Pitted orange-brown surface rust following the exact contour of the sweet spot — the wear pattern is the tell, not random speckle.

Material: aged/rusted mild steel. **Dims:** ~90mm face length, thin ~8mm blade depth.

- Wilson 8802 blade – The Brassie
- 8802 review

Brass Relic

brass_relic · Uncommon

"Heavy and soft. Rolls the ball early."

A rounded flanged-blade head with a small tail extension behind a shaft set closer to centre — the classic mid-century "flange blade" shape. Solid cast brass, evenly darkened patina all over, deep green oxidation pooled in the flange corners and the cavity.

Material: solid brass, uneven all-over patina + verdigris in recesses. **Dims:** ~95mm face length, rounded toe and heel.

- History of the Bulls Eye putter
- Bulls Eye putter – The Brassie

Midnight Mallet

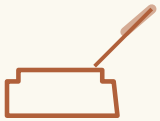

midnight_mallet · Rare

"Muted thud. Hard to twist, easy to trust."

A rounded, high-MOI mallet body — oval from above, deep from face to back for perimeter weighting. Matte black finish with two crisp parallel white alignment lines running the full length of the top, plus a short centre tick. No wings; keep the outline smooth and rounded, not angular.

Material: matte black anodized/PVD, gloss-white inlay lines. **Dims:** ~120mm long, ~70mm wide, deep profile.

- Spider Mallet 2.0 – TaylorMade
- Evolution of the Spider

Copper Classic

copper_classic · Epic

"Warm click, glassy release."

A precise heel-toe weighted blade — a hollowed centre section with distinct weight blocks left at the heel and toe, plumber's-neck hosel. This is the "classic Anser silhouette" done in solid warm copper: bright polished copper crown, satin copper face, no plating anywhere so it never shows wear-through.

Material: solid copper, polished top / satin face. **Dims:** ~100mm face length, visible milled heel and toe weight pads.

- History of the PING Anser
- The Anser, most iconic putter?

Tourline Prototype

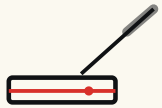

tourline_prototype · Epic

"Firm and stable, oddly quiet."

A raw-milled winged mallet: two small angular wing pontoons splayed off the back corners of a squared body, unfinished bead-blasted steel with no paint fill except one bold blue sightline down the centre. No brand mark, no model name — if anything, a small handwritten number on the sole.

Material: raw bead-blasted steel, single blue paint-fill line. **Dims:** ~115mm wide across the wings.

- Spider Tour (winged prototype lineage)

Blackout Tour Issue

blackout_tour_issue · Legendary

"Dense and dead-center. Nothing rattles."

A precision tour blade, longer and heavier-looking than the loaner: deep milled face pattern, a full-length red sightline, a small removable weight port near the toe (a tour weight-kit detail). All-matte black finish, deliberately unmarked except a circular stamp hidden under where the grip sits.

Material: matte black PVD/DLC, red paint-fill sightline, one visible weight-port screw.

What "Circle T" means

Tour-issue putter gallery

Scotty Cameron — The Grail

scotty_grail · Mythic

"That sound. Soft, solid, unmistakable."

The Newport silhouette: a compact, slightly flanged blade with a plumber's neck. Bright chrome/steel finish, deeply milled face, and the signature detail — three small cherry-red dots inlaid in a row on the cavity. Include a matching fitted headcover as a display prop; this is the one entry that should look expensive from across the room.

Material: polished 303 stainless look, milled face, three red-lacquer dot inlays. **Dims:** ~90mm face length, Newport proportions.

The real red dots – GOLF.com

Circle T explained

Tour putter gallery

08

Admin sandbox · never shown to normal players

Developer-only novelty equipment. One reuses a shared mesh with a loud skin; the other is a from-scratch object, since nothing in golf looks like it.

Driver mesh · skin only

Grenade Prototype Driver

grenade_driver · Mythic (illegal)

Same driver head mesh as every other driver — the joke is entirely in the texture. Olive-drab crown with a laser-etched cross-hatch grenade-body pattern, a yellow-ringed "pin" decal near the hosel standing in for a safety pin, and a stencilled ordnance-style serial number on the sole. This is a direct nod to a real novelty club.

- BombTech Grenade driver review
- Independent Grenade review

Unique mesh · no real-world twin

Auto-Putt 9000

auto_putt_9000 · Mythic (illegal)

The one item with nothing to reference in golf — go full gadget instead. A rounded, low mallet-sized chassis in gunmetal with a small teal-glass sensor dome on top (the "eye" that reads the green), a thin LED strip along the top-line that lights up teal when it locks a line, and a stubby, slightly oversized neck to hint at hidden servo motors. No alignment lines — it doesn't need your help lining up.

- No golf reference — borrow from consumer robotics/gadget design language

Compiled for the OpenFairway Golf equipment pipeline. Rarity colors and prices are pulled directly from `data/economy.json` / `data/club_catalog.json` so this stays in sync with the live game data. External links are reference material for silhouette and finish only — no brand names, logos, or trademarks should appear in the shipped assets.
